Tissue segmentation

Tissue	Volume (cm^3/%)	
White Matter (WM)	390.56 (31.577)	[30.305, 41.039]
Normal Appearing White Matter	389.50 (31.491)	[30.001, 40.825]
Abnormal Appearing White Matter	1.06 (0.086)	[0.011, 0.506]
Grey Matter (GM)	760.15 (61.458)	[51.941, 60.187]
Subcortical Grey Matter	42.13 (3.406)	[2.934, 3.714]
Cortical Grey Matter	604.62 (48.884)	[41.192, 48.174]
Cerebellar Grey Matter	113.40 (9.169)	[6.734, 9.380]
Cerebro Spinal Fluid (CSF)	69.49 (5.618)	[2.288, 11.585]
Brain (WM+GM)	1150.71 (93.034)	[87.163, 96.309]
Intracranial Cavity (IC)	1236.86 (100.000)	[100.000, 100.000]

**All the volumes are presented in absolute value (measured in cm^3) and in relative value (measured in relation to the ICV).*

**The Asymmetry Index is calculated as the difference between right and left volumes divided by their mean (in percent).*

**Segmentation images are located in the MNI space (neurological orientation).*

**Values between brackets show expected limits (95%) of normalized volume in function of sex and age for each measure for reference purpose. Values outside the limits are highlighted in red.*
